ORAL SYSTEM

Oraflogo®

FOR ALL ORAL PROBLEMS

The world's leading solution to naturally heal and relieve pain in the oral mucosa.

16 YEARS OF EXPERIENCE IN PROFESSIONAL ORAL CARE

Oraflogo® ORAL SYSTEM
FOR ALL ORAL PROBLEMS

The power of Oraflogo® Oral System is in its ingredients

Oraflogo® Oral System was developed by a professional team of experts in oral care. Its formulation is based on the proven positive effects of carefully selected natural ingredients and hyaluronic acid.

The effect of herbs and hyaluronic acid

Hyaluronic acid	Hyaluronate has an anti-inflammatory, antidematous and antibacterial effect in the treatment of periodontal diseases. It contributes to the regeneration of periodontal tissue and the treatment of periodontal disease.
Aloe vera	Aloe vera biologically promotes wound healing, has antifungal, anti-inflammatory and immunomodulatory properties.
Coenzyme Q10	Topical application of coenzyme Q10 improves periodontitis, gingival index and bleeding index.
Tea tree oil	Tea tree oil, with its combination of at least eight different oils, has significant antioxidant properties. It has an anti-inflammatory effect, promotes cell proliferation and has antibacterial and antifungal properties.
Thyme	Thyme plays an important role in improving oral hygiene. It strengthens gums and protects teeth against caries.
Centella asiatica	Centella asiatica is responsible for healing wounds and inhibiting scar formation. It promotes angiogenesis, improves capillary circulation, increases collagen production and stimulates cellular hyperplasia.
Allantoin	Allantoin with its moisturising function soothes irritated oral tissue, prevents dry mouth and restores the epidermis.
Mediterranean cypress	Mediterranean cypress essential oil treats inflammation and toothache, is an effective inhibitor of biofilm in K. pneunomiae and has potent antiviral properties.
Australian hazelnut	Australian hazelnut has high antibacterial and antifungal properties.
Fenugreek	Fenugreek seeds have an antinociceptive, anti-inflammatory, anti-ulcer and cicatrizing effects. It provides significant pain relief.
Horse chestnut	Horse chestnut has an antibacterial effect against oral bacteria, decreases the transcapillary filtration of water and proteins, reduces swelling and lysosomal enzyme activity and improves venous tone.

* The selection of ingredients is based on 97 studies demonstrating their positive effects on the oral mucosa.

Oraflogo® products contain a significant amount of hyaluronic acid (up to 0,3%) in three different molecular weights, which is crucial for better absorption in all layers of the oral mucosa.

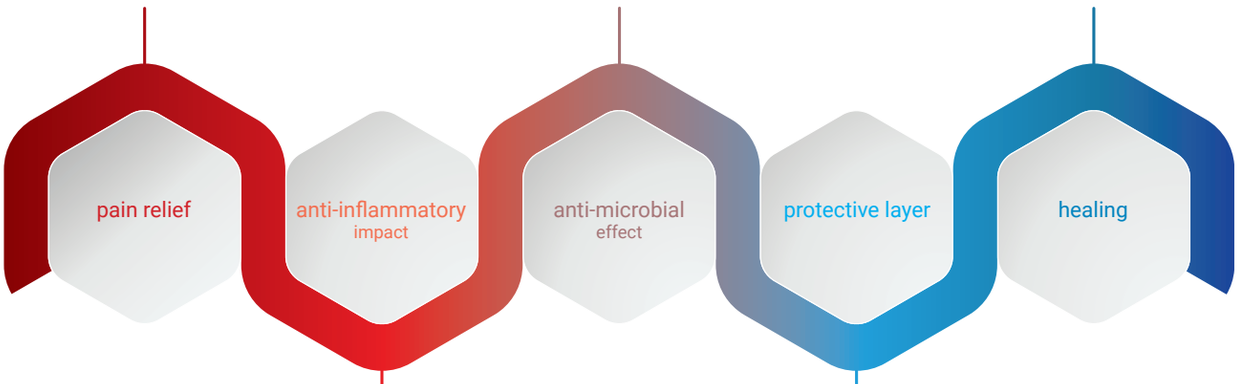

Oraflogo® ORAL SYSTEM
FOR ALL ORAL PROBLEMS

Oraflogo® ways of action

Relieves pain immediately and effectively soothes irritated gums.

Has an anti-microbal, antibacterial, antiviral and antifungal effect.

Heals and promotes the regeneration of damaged tissue. Improves blood circulation.

Has an anti-inflammatory effect, prevents formation of scars and reduces swelling.

Forms protective layer over oral tissue and nourishes the oral muscosa.

preventive care

Works preventively. Protects the oral tissues against external pathogens, stabilises the cell membrane, moisturises oral tissue, softens skin, strengthens gums and improves oral hygiene.

Oral conditions

- aphthae, ulcers and herpes
- mouth ulcers caused by dentures or braces
- gingivitis and periodontitis
- inflamed, bleeding and irritated gums
- surgical wounds
- stomatitis after chemotherapy

The importance of oral health

Oral health is not just about teeth and gums. Oral health is also essential to good overall health and it can help prevent a number of diseases. Quality oral products are crucial for everyone in order to maintain a healthy mouth, teeth, gums and oral mucosa.

Oraflogo® ORAL SYSTEM
FOR ALL ORAL PROBLEMS

Exclusive formulation

The composition of all selected ingredients follows carefully designed manufacturing protocol in order to ensure they have maximum effect.

This exceptional composition was clinically compared with corticosteroids and was proven to be just as effective. It effectively healed post-operative lesions, periodontal tissue inflammation and oral ulceration.

97% *

of patients who tried Oraflogo® were very satisfied or satisfied with the product and felt that it is better than any other product they have previously used.

Why **Oraflogo®?**

Extended product stability

Special aluminium laminated tube technology is used for all Oraflogo® products that come in tubes in order to provide long-lasting product stabiltiy. Aluminium provides tubes without a “pump” effect and the laminated coating prevents the tube from cracking on the sides. This results in long lasting product stability. Oraflogo® products have a three-year period of clinically proven stability.

Oraflogo® ORAL SYSTEM
FOR ALL ORAL PROBLEMS

Clinical studies on Oraflogo® Oral System

Oraflogo® Original gel has a unique formulation of carefully selected natural ingredients that have clinically proven positive effects on the soft tissues in the oral cavity. 97% of patients who tried the gel were very satisfied or satisfied with the product and felt that it is better than previous products they have been using over the past two years* (Kulis, Necimer, Kulis and Kulis, 2014).

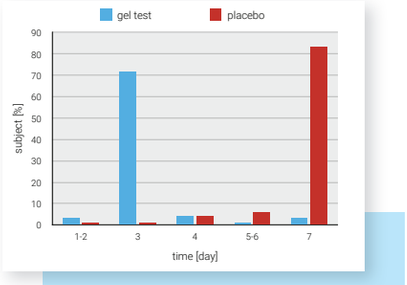

The gel and corticosteroids are equally and comparably effective in reducing ulcer pain during treatment. Both preparations are equally effective at treating ulcers through reducing their size. Therefore Oraflogo® Original gel is as effective as the proven corticosteroid triamcinolone acetonide (Sever, 2018).

Comparison of pain reduction during treatment

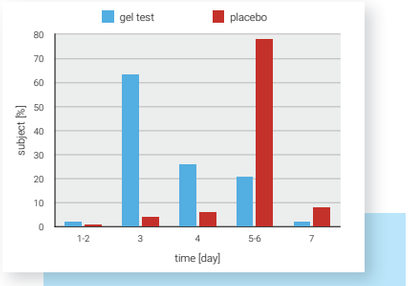

Oraflogo® Original gel positively affects the healing of post-operative wounds, periodontal tissue inflammation and the healing of oral ulceration (Morche, 2015).

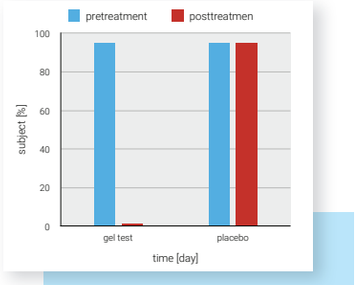

Disappearance of pain during treatment

Disappearance of post-extraction bleeding during treatment

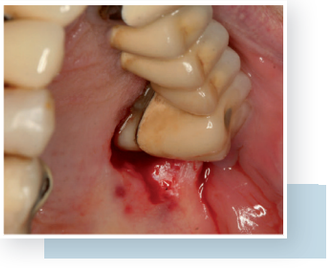

Disappearance of gingival bleeding during treatment

Periodontitis with a deep pocket (6 mm)

Surgical gingival lesion

Healed lesion after 7 days, with the use of gel

The ratings of Oraflogo® Junior gel users who use the gel 2-3 times a day are significantly high, after 14 days of use the ratings are even more favorable than after 7 days of use, there is no need to improve the product's performance, but only its flavor, color, density and packaging (Kovačić, Nemec, 2021).
